

# Project Report

“Jubilee Park” Canary Wharf, London

The “Jubilee Park” from above, surrounded of high buildings.

## Conception

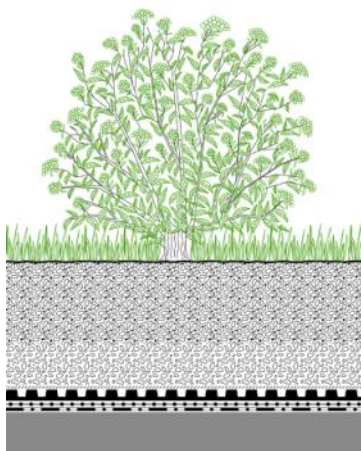

Jubilee Park is a haven of peace, a green lung within the dense urban centre of Canary Wharf. This large park was built within the London docklands above an underground station, a shopping mall and a public car park.

Its curvilinear design provides a positive contrast to both the scale and the

straightness of the surrounding buildings. With its central meandering water feature, its 22 fountains and pools, the park is a pleasant setting for occasional art exhibitions.

It was established on time for the Golden Jubilee celebration of Queen Elisabeth II and was named after that anniversary.

## System Build-up

- Lawn, Shrubs and Trees
- System Substrate “Lawn”, 200–400 mm
- Mineral Substrate, 100–500 mm
- Filter Sheet TG
- Elastodrain® EL 200
- Slip Sheet TGF 20
- Roof construction with root resistant waterproofing

## Project Data

Area: ca. 10.000 m<sup>2</sup>

Construction Year: 2001/2002

Architects:  
BDP, London

Landscape architects:  
Wirtz International and  
Barry Chin Associates

General contractor:  
Canary Wharf Contracts

Contractor:  
- Waterproofing: Performance & Deck  
Roofing  
- Green Area: Willerby Landscapes

Technical advice:  
Alumasc Exterior Building Products Ltd

Coordinates:  
51°30'11.97"N 0°01'06.97"W

Large entrance leading to the Canary Wharf tube station.

View over the sprawling lawn interspersed with solitary trees and winding paths.

Serpentine stone basins with fountains are the dominant feature of this landscaped park.
